

# ProctoLight™ formerly Cyclopes

Self contained, self illuminating proctoscope

A unique proctoscope with its very own internal light source designed to provide a shadow-free environment during rectal examinations.

ProctoLight™ is a single patient use, self illuminating proctoscope. The white body and internal light source provides a shadow-free environment that ensures there is no need for any additional lighting or power to operate.

The unique design of ProctoLight™ includes the innovative 'Genie II' light source. Located in the handle at the base of the obturator the light is activated by the removal of a small plastic tab. When you have finished, take out the light unit and dispose of separately in accordance with local hospital or surgery protocol.

The tapered front of the obturator allows for gentle insertion into the anal canal. The handle is ergonomically designed to hold comfortably and provides full support in the manipulation of the proctoscope throughout the period of examination.

ProctoLight™ comes sterile packed and ready for immediate use.

#### Ordering Information

<b>Large</b>	Part Number	CLP-01
<b>Medium</b>	Part Number	CLP-02

Quantity	25 units per case
Description	Self illuminating proctoscope
Delivery	Usually ex-works

#### Technical Specifications

Moulded from medical grade ABS, white

##### CLP-01 (large)

Tapered insertion end length 22.6mm, taper 45.9°

Insertion length 61.4mm, width 28.4mm

Visualisation diameter 24.5mm, area 471.435mm

##### CLP-02 (medium)

Tapered insertion end length 20.75mm, taper 24.2°

Insertion length 50mm, width 24mm

Visualisation diameter 20.2mm, area 320.31mm

Handle length 92mm, width 26mm, depth 10mm

Total length of ProctoLight™ 145.7mm

#### Electrical Specifications

Light source: white LED 5mm diameter, 1200 med @ 15°

EMC: EN 60601-1:1990

MES to EN 60601-1:1990

LED intensity to EN 60825

Manufactured and tested to ISO 13485:2003
